

Package ‘CRISPRseek’

October 7, 2014

Type Package

Title Design of target-specific guide RNAs in CRISPR-Cas9, genome-editing systems

Version 1.0.3

Date 2014-07-21

Author Lihua Julie Zhu, Benjamin R. Holmes, Neil Aronin and Michael Brodsky

Maintainer Lihua Julie Zhu <julie.zhu@umassmed.edu>

Depends R (>= 3.0.1), BiocGenerics, Biostrings, BSgenome

biocViews GeneRegulation, SequenceMatching

Suggests

RUnit, BiocStyle, BSgenome.Hsapiens.UCSC.hg19, TxDb.Hsapiens.UCSC.hg19.knownGene

Description The package includes functions to find potential guide RNAs for input target sequences, optionally filter guide RNAs without restriction enzyme cut site, or without paired guide RNAs, genome-wide search for off-targets, score, rank, fetch flank sequence and indicate whether the target and off-targets are located in exon region or not. Potential guide RNAs are annotated with total score of the top5 and topN off-targets, detailed topN mismatch sites, restriction enzyme cut sites, and paired guide RNAs. This package leverages Biostrings and BSgenome packages.

| CRISPRseek-package | <i>Design of target-specific guide RNAs (gRNAs) in CRISPR-Cas9, genome-editing systems</i> |
|--------------------|--|

Description

Design of target-specific gRNAs for the CRISPR-Cas9 system by automatically finding potential gRNAs (paired/not paired), with/without restriction enzyme cut site(s) in a given sequence, searching for off targets with user defined maximum number of mismatches, calculating score of each off target based on mismatch positions in the off target and a penalty weight matrix, filtering off targets with user-defined criteria, and annotating off targets with flank sequences, whether located in exon or not. Summary report is also generated with gRNAs ranked by total topN off target score, annotated with restriction enzyme cut sites and possible paired gRNAs. Detailed paired gRNAs information and restriction enzyme cut sites are stored in separate files in the output directory specified by the user. In total, four tab delimited files are generated in the output directory: Off-targetAnalysis.xls (off target details), Summary.xls (gRNA summary), REcutDetails.xls (restriction enzyme cut sites of each gRNA), and pairedgRNAs.xls (potential paired gRNAs).

Details

Package: CRISPRseek
 Type: Package

offTargetAnalysis

Examples

```

library(CRISPRseek)
library("BSgenome.Hsapiens.UCSC.hg19")
library(TxDb.Hsapiens.UCSC.hg19.knownGene)
outputDir <- getwd()
inputFilePath <- system.file("extdata", "inputseq.fa", package = "CRISPRseek")
REpatternFile <- system.file("extdata", "NEBenzymes.fa", package = "CRISPRseek")
##### Scenario 1. Target and off-target analysis for paired gRNAs with
##### one of the pairs overlap RE sites

offTargetAnalysis(inputFilePath, findgRNAsWithREcutOnly=TRUE,
  REpatternFile =REpatternFile,findPairedgRNAOnly=TRUE,
  BSgenomeName=Hsapiens, txdb=TxDb.Hsapiens.UCSC.hg19.knownGene,
  max.mismatch = 1, chromToSearch = "chrX",
  outputDir = outputDir,overwrite = TRUE)

##### Scenario 2. Target and off-target analysis for paired gRNAs with or
##### without RE sites
offTargetAnalysis(inputFilePath, findgRNAsWithREcutOnly = FALSE,
  REpatternFile = REpatternFile,findPairedgRNAOnly = TRUE,
  BSgenomeName = Hsapiens, txdb = TxDb.Hsapiens.UCSC.hg19.knownGene,
  max.mismatch = 1, chromToSearch = "chrX",
  outputDir = outputDir, overwrite = TRUE)

##### Scenario 3. Target and off-target analysis for gRNAs overlap RE sites

offTargetAnalysis(inputFilePath, findgRNAsWithREcutOnly = TRUE,
  REpatternFile = REpatternFile,findPairedgRNAOnly = FALSE,
  BSgenomeName = Hsapiens, txdb = TxDb.Hsapiens.UCSC.hg19.knownGene,
  max.mismatch = 1, chromToSearch = "chrX",
  outputDir = outputDir, overwrite = TRUE)

##### Scenario 4. Off-target analysis for all potential gRNAs, this will
#####be the slowest among the aforementioned scenarios.

offTargetAnalysis(inputFilePath, findgRNAsWithREcutOnly = FALSE,
  REpatternFile = REpatternFile,findPairedgRNAOnly = FALSE,
  BSgenomeName = Hsapiens, txdb = TxDb.Hsapiens.UCSC.hg19.knownGene,
  max.mismatch = 1, chromToSearch = "chrX",
  outputDir = outputDir,overwrite = TRUE)

##### Scenario 5. Target and off-target analysis for gRNAs input by user.
gRNAFilePath <- system.file("extdata", "testHsap_GATA1_ex2_gRNA1.fa",
  package="CRISPRseek")
offTargetAnalysis(inputFilePath = gRNAFilePath, findgRNAs = FALSE,

```

```

findgRNAsWithREcutOnly = FALSE, REpatternFile = REpatternFile,
findPairedgRNAOnly = FALSE, BSgenomeName = Hsapiens,
txdb = TxDb.Hsapiens.UCSC.hg19.knownGene,
max.mismatch = 1, chromToSearch = "chrX",
outputDir = outputDir, overwrite = TRUE)

##### Scenario 6. Quick gRNA finding without target and off-target analysis
offTargetAnalysis(inputFilePath, findgRNAsWithREcutOnly = TRUE,
REpatternFile = REpatternFile, findPairedgRNAOnly = TRUE,
chromToSearch = "", outputDir = outputDir, overwrite = TRUE)

```

```

buildFeatureVectorForScoring
      Build feature vectors

```

Description

Build feature vectors for calculating scores of off targets

Usage

```
buildFeatureVectorForScoring(hits, gRNA.size = 20, canonical.PAM = "NGG")
```

Arguments

| | |
|---------------|--|
| hits | a data frame generated from searchHits, which contains IsMismatch.posX (Indicator variable indicating whether this position X is mismatch or not, 1 means yes and 0 means not, X = 1- gRNA.size) representing all positions in the guide RNA, abbreviated as gRNA), strand (strand of the off target, + for plus and - for minus strand), chrom (chromosome of the off target), chromStart (start position of the off target), chromEnd (end position of the off target), name (gRNA name), gRNAPlusPAM (gRNA sequence with PAM sequence concatenated), OffTargetSequence (the genomic sequence of the off target), n.mismatch (number of mismatches between the off target and the gRNA), forViewInUCSC (string for viewing in UCSC genome browser, e.g., chr14:31665685-31665707), score (set to 100, and will be calculated in getOfftargetScore) |
| gRNA.size | gRNA size, default 20 |
| canonical.PAM | Canonical PAM, default NGG |

Value

A data frame with hits plus features used for calculating scores and for generating report, including IsMismatch.posX (Indicator variable indicating whether this position X is mismatch or not, 1 means yes and 0 means not, X = 1- gRNA.size) representing all positions in the gRNA), strand (strand of the off target, + for plus and - for minus strand), chrom (chromosome of the off target), chromStart (start position of the off target), chromEnd (end position of the off target), name (gRNA name), gRNAPlusPAM (gRNA sequence with PAM sequence concatenated), OffTargetSequence (the genomic sequence of the off target), n.mismatch (number of mismatches between

the off target and the gRNA), `forViewInUCSC` (string for viewing in UCSC genome browser, e.g., `chr14:31665685-31665707`), `score` (score of the off target), `mismatche.distance2PAM` (a comma separated distances of all mismatches to PAM, e.g., `14,11` means one mismatch is 14 bp away from PAM and the other mismatch is 11 bp away from PAM), `alignment` (alignment between gRNA and off target, e.g., `.....G.C.....` means that this off target aligns with gRNA except that G and C are mismatches), `NGG` (this off target contains canonical PAM or not, 1 for yes and 0 for no) `mean.neighbor.distance.mismatch` (mean distance between neighboring mismatches)

```
hitsFile <- system.file("extdata", "hits.txt", package = "CRISPRseek")
hits <- read.table(hitsFile, sep = "\t", header = TRUE,
  stringsAsFactors = FALSE)
buildFeatureVectorForScoring(hits)
```

`compare2Sequences` *Compare 2 input sequences for possible guide RNAs (gRNAs)*

Description

Generate all possible guide RNAs (gRNAs) for two input sequences and generate scores for potential off-targets in the other sequence.

Usage

```
compare2Sequences(inputFile1Path, inputFile2Path, format = "fasta",
  findgRNAsWithREcutOnly = FALSE, REpatternFile, minREpatternSize = 6,
  overlap.gRNA.positions = c(17, 18), findPairedgRNAOnly = FALSE,
  min.gap = 0, max.gap = 20, gRNA.name.prefix = "gRNA", PAM.size = 3,
  gRNA.size = 20, PAM = "NGG", PAM.pattern = "N[A|G]G$", max.mismatch = 4,
  outputDir,
  weights = c(0, 0, 0.014, 0, 0, 0.395, 0.317, 0, 0.389, 0.079, 0.445,
  0.508, 0.613, 0.851, 0.732, 0.828, 0.615, 0.804, 0.685, 0.583),
  overwrite = FALSE)
```

Arguments

| | |
|------------------------|--|
| inputFile1Path | Sequence input file 1 path that contains one of the two sequences to be searched for potential gRNAs |
| inputFile2Path | Sequence input file 2 path that contains one of the two sequences to be searched for potential gRNAs |
| format | Format of the input file, fasta and fastq are supported, default fasta |
| findgRNAsWithREcutOnly | Indicate whether to find gRNAs overlap with restriction enzyme recognition pattern |
| REpatternFile | File path containing restriction enzyme cut patterns |
| minREpatternSize | Minimum restriction enzyme recognition pattern length required for the enzyme pattern to be searched for, default 6 |
| overlap.gRNA.positions | The required overlap positions of gRNA and restriction enzyme cut site, default 17 and 18 |
| findPairedgRNAOnly | Choose whether to only search for paired gRNAs in such an orientation that the first one is on minus strand called reverse gRNA and the second one is on plus strand called forward gRNA. TRUE or FALSE, default FALSE |
| min.gap | Minimum distance between two oppositely oriented gRNAs to be valid paired gRNAs. Default 0 |
| max.gap | Maximum distance between two oppositely oriented gRNAs to be valid paired gRNAs. Default 20 |
| gRNA.name.prefix | The prefix used when assign name to found gRNAs, default gRNA, short for guided RNA. |
| PAM.size | PAM length, default 3 |
| gRNA.size | The size of the gRNA, default 20 |
| PAM | PAM sequence after the gRNA, default NGG |
| PAM.pattern | Regular expression of PAM, default N[AIG]G\$ |
| max.mismatch | Maximum mismatch allowed to search the off targets in the other sequence, default 4 |
| outputDir | the directory where the sequence comparison results will be written to |
| weights | numeric vector size of gRNA length, default c(0, 0, 0.014, 0, 0, 0.395, 0.317, 0, 0.389, 0.079, 0.445, 0.508, 0.613, 0.851, 0.732, 0.828, 0.615, 0.804, 0.685, 0.583) which is used in Hsu et al., 2013 cited in the reference section |
| overwrite | overwrite the existing files in the output directory or not, default TRUE |

Value

Return a data frame with all potential gRNAs from both sequences. In addition, a tab delimited file scoresFor2InputSequences.xls is also saved in the outputDir, sorted by scoreDiff descending.

| | |
|--------------------------|--|
| name | name of the gRNA |
| gRNAPlusPAM | gRNA plus PAM sequence |
| targetInSeq1 | target/off-target sequence including PAM in the 1st input sequence file |
| targetInSeq2 | target/off-target sequence including PAM in the 2nd input sequence file |
| guideAlignment2Offtarget | alignment of gRNA to the other input sequence (off-target sequence) |
| offTargetStrand | strand of the other sequence (off-target sequence) the gRNA align to |
| scoreForSeq1 | score for the target sequence in the 1st input sequence file |
| scoreForSeq2 | score for the target sequence in the 1st input sequence file |
| mismatch.distance2PAM | distances of mismatch to PAM, e.g., 14 means the mismatch is 14 bp away from PAM |
| n.mismatch | number of mismatches between the off-target and the gRNA |
| targetSeqName | the name of the input sequence where the target sequence is located |
| scoreDiff | scoreForSeq1 - scoreForSeq2 |

```

 filtergRNAs

Filter gRNAs

Description

Filter gRNAs containing restriction enzyme cut site

Usage

```
filtergRNAs(all.gRNAs, pairOutputFile = "",
            findgRNAsWithREcutOnly = FALSE,
            REpatternFile, format = "fasta",
            minREpatternSize = 6, overlap.gRNA.positions = c(17, 18))
```

Arguments

`all.gRNAs` gRNAs as DNASTringSet, such as the output from findgRNAs

`pairOutputFile` File path with paired gRNAs

`findgRNAsWithREcutOnly`
Indicate whether to find gRNAs overlap with restriction enzyme recognition pattern

`REpatternFile` File path containing restriction enzyme cut patterns

`format` Format of the REpatternFile, default as fasta

`minREpatternSize`
Minimum restriction enzyme recognition pattern length required for the enzyme pattern to be searched for, default 6

`overlap.gRNA.positions`
The required overlap positions of gRNA and restriction enzyme cut site, default 17 and 18

Value

`gRNAs.withRE` gRNAs as DNASTringSet that passed the filter criteria

`gRNAREcutDetails`
a data frame that contains a set of gRNAs annotated with restriction enzyme cut details

restriction.enzyme.cut.sites <- gRNAs.RE$gRNAREcutDetails
```

| | |
|-----------------|---|
| filterOffTarget | <i>filter off targets and generate reports.</i> |
|-----------------|---|

Description

filter off targets that meet the criteria set by users such as minimum score, topN. In addition, off target was annotated with flank sequence and whether it is inside an exon or not if fetchSequence is set to TRUE and annotateExon is set to TRUE

Usage

```
filterOffTarget(scores, min.score = 0.5, topN = 100,
  topN.OfftargetTotalScore = 10,
  annotateExon = TRUE, txdb, outputDir, oneFilePergRNA = FALSE,
  fetchSequence = TRUE, upstream = 200, downstream = 200, BSgenomeName)
```

Arguments

| | |
|--------|--|
| scores | a data frame output from getOfftargetScore. It contains strand (strand of the off target, + for plus and - for minus strand), chrom (chromosome of the off target), chromStart (start position of the off target), chromEnd (end position of the off target), name (gRNA name), gRNAPlusPAM (gRNA sequence with PAM sequence concatenated), OffTargetSequence (the genomic sequence of the off target), n.mismatch (number of mismatches between the off target and the gRNA), forViewInUCSC (string for viewing in UCSC genome browser, e.g., chr14:31665685-31665707), score (score of the off target), mismatche.distance2PAM (a comma separated distances of all mismatches to PAM, e.g., 14,11 means one mismatch is 14 bp away from PAM and the other mismatch is 11 bp away from PAM), alignment (alignment between gRNA and off target, e.g.,G..C..... means that this off target aligns with gRNA except that G and C are mismatches), NGG (this off target contains canonical PAM or not, 1 for yes and 0 for no) mean.neighbor.distance.mismatch (mean distance between neighboring mismatches) |
|--------|--|

| | |
|---------------------------------------|--|
| <code>min.score</code> | minimum score of an off target to included in the final output, default 0.5 |
| <code>topN</code> | top N off targets to be included in the final output, default 100 |
| <code>topN.OfftargetTotalScore</code> | top N off target used to calculate the total off target score, default 10 |
| <code>annotateExon</code> | Choose whether or not to indicate whether the off target is inside an exon or not, default TRUE |
| <code>txdb</code> | TranscriptDb object, for creating and using TranscriptDb object, please refer to GenomicFeatures package. For a list of existing TranscriptDb object, please search for annotation package starting with Txdb at http://www.bioconductor.org/packages/release/BiocV such as TxDb.Rnorvegicus.UCSC.rn5.refGene for rat, TxDb.Mmusculus.UCSC.mm10.knownGene for mouse, TxDb.Hsapiens.UCSC.hg19.knownGene for human, TxDb.Dmelanogaster.UCSC.dm3.ensGene for Drosophila and TxDb.Celegans.UCSC.ce6.ensGene for C.elegans |
| <code>outputDir</code> | the directory where the off target analysis and reports will be written to |
| <code>oneFilePergrna</code> | write to one file for each grNA or not, default to FALSE |
| <code>fetchSequence</code> | Fetch flank sequence of off target or not, default TRUE |
| <code>upstream</code> | upstream offset from the off target start, default 200 |
| <code>downstream</code> | downstream offset from the off target end, default 200 |
| <code>BSgenomeName</code> | BSgenome object. Please refer to available.genomes in BSgenome package. For example, BSgenome.Hsapiens.UCSC.hg19 for hg19, BSgenome.Mmusculus.UCSC.mm10 for mm10, BSgenome.Celegans.UCSC.ce6 for ce6, BSgenome.Rnorvegicus.UCSC.rn5 for rn5, and BSgenome.Dmelanogaster.UCSC.dm3 for dm3 |

Value

| | |
|-------------------------|--|
| <code>offtargets</code> | a data frame with off target analysis results |
| <code>summary</code> | a data frame with summary of the off target analysis results |

Author(s)

results$summary

```

findgRNAs

Find potential gRNAs

Description

Find potential gRNAs for an input file containing sequences in fasta format

Usage

```

findgRNAs(inputFilePath, format = "fasta", PAM = "NGG", PAM.size = 3,
  findPairedgRNAOnly = FALSE, gRNA.pattern = "", gRNA.size = 20, min.gap = 0, max.gap = 20,
  pairOutputFile, name.prefix = "gRNA")

```

Arguments

| | |
|--------------------|---|
| inputFilePath | Sequence input file path or a DNASTringSet object that contains sequences to be searched for potential gRNAs |
| format | Format of the input file, fasta and fastq are supported, default fasta |
| PAM | protospacer-adjacent motif (PAM) sequence after the gRNA, default NGG |
| PAM.size | PAM length, default 3 |
| findPairedgRNAOnly | Choose whether to only search for paired gRNAs in such an orientation that the first one is on minus strand called reverse gRNA and the second one is on plus strand called forward gRNA. TRUE or FALSE, default FALSE |
| gRNA.pattern | Regular expression or IUPAC Extended Genetic Alphabet to represent gRNA pattern, default is no restriction. To specify that the gRNA must start with GG for example, then set it to ^GG. Please see help(translatePattern) for a list of IUPAC Extended Genetic Alphabet. |
| gRNA.size | The size of the gRNA, default 20 |
| min.gap | Minimum distance between two oppositely oriented gRNAs to be valid paired gRNAs. Default 0 |
| max.gap | Maximum distance between two oppositely oriented gRNAs to be valid paired gRNAs. Default 20 |
| pairOutputFile | The output file for writing paired gRNA information to |
| name.prefix | The prefix used when assign name to found gRNAs, default gRNA, short for guided RNA. |

Details

If users already has a fasta file that contains a set of potential gRNAs, then users can call filergRNAs directly although the easiest way is to call the one-stop-shopping function OffTargetAnalysis with findgRNAs set to FALSE.

Value

DNAStrngSet consists of potential gRNAs that can be input to filtergRNAs function directly

Note

If the input sequence file contains multiple >300 bp sequences, suggest create one input file for each sequence and run the OffTargetAnalysis separately.

  findPairedgRNAOnly = TRUE)
```

| | |
|-------------------|--|
| getOfftargetScore | <i>Calculate score for each off target</i> |
|-------------------|--|

Description

Calculate score for each off target with given feature vectors and weights vector

Usage

```
getOfftargetScore(featureVectors,
  weights = c(0, 0, 0.014, 0, 0, 0.395, 0.317, 0, 0.389, 0.079, 0.445, 0.508,
  0.613, 0.851, 0.732, 0.828, 0.615, 0.804, 0.685, 0.583))
```

Arguments

featureVectors a data frame generated from buildFeatureVectorForScoring. It contains IsMismatch.posX (Indicator variable indicating whether this position X is mismatch or not, 1 means yes and 0 means not, X = 1- gRNA.size) representing all positions in the gRNA), strand (strand of the off target, + for plus and - for minus strand), chrom (chromosome of the off target), chromStart (start position of the off target), chromEnd (end position of the off target), name (gRNA name),gRNAPlusPAM (gRNA sequence with PAM sequence concatenated), OffTargetSequence (the genomic sequence of the off target), n.mismatch (number of mismatches between the off target and the gRNA), forViewInUCSC (string

for viewing in UCSC genome browser, e.g., chr14:31665685-31665707), score (score of the off target), mismatche.distance2PAM (a comma separated distances of all mismatches to PAM, e.g., 14,11 means one mismatch is 14 bp away from PAM and the other mismatch is 11 bp away from PAM), alignment (alignment between gRNA and off target, e.g.,G..C..... means that this off target aligns with gRNA except that G and C are mismatches),NGG (this off target contains canonical PAM or not, 1 for yes and 0 for no) mean.neighbor.distance.mismatch (mean distance between neighboring mismatches)

weights a numeric vector size of gRNA length, default c(0, 0, 0.014, 0, 0, 0.395, 0.317, 0, 0.389, 0.079, 0.445, 0.508, 0.613, 0.851, 0.732, 0.828, 0.615, 0.804, 0.685, 0.583) which is used in Hsu et al., 2013 cited in the reference section

Details

score is calculated using the weights and algorithm by Hsu et al., 2013 cited in the reference section

Value

a data frame containing strand (strand of the match, + for plus and - for minus strand), chrom (chromosome of the off target), chromStart (start position of the off target), chromEnd (end position of the off target), name (gRNA name), gRNAPlusPAM (gRNA sequence with PAM sequence concatenated), OffTargetSequence (the genomic sequence of the off target), n.mismatch (number of mismatches between the off target and the gRNA), forViewInUCSC (string for viewing in UCSC genome browser, e.g., chr14:31665685-31665707), score (score of the off target), mismatche.distance2PAM (a comma separated distances of all mismatches to PAM, e.g., 14,11 means one mismatch is 14 bp away from PAM and the other mismatch is 11 bp away from PAM), alignment (alignment between gRNA and off target, e.g.,G..C..... means that this off target aligns with gRNA except that G and C are mismatches), NGG (this off target contains canonical PAM or not, 1 for yes and 0 for no) mean.neighbor.distance.mismatch (mean distance between neighboring mismatches)

offTargetAnalysis *Design of target-specific guide RNAs for CRISPR-Cas9 system in one function*

Description

Design of target-specific guide RNAs (gRNAs) for CRISPR-Cas9 system by automatically calling findgRNAs, filtergRNAs, searchHits, buildFeatureVectorForScoring, getOfftargetScore, filterOfftarget and generate reports.

Usage

```

offTargetAnalysis(inputFilePath, format = "fasta", findgRNAs = TRUE,
  exportAllgRNAs = c("all", "fasta", "genbank", "no"),
  findgRNAsWithREcutOnly = TRUE, REpatternFile, minREpatternSize = 6,
  overlap.gRNA.positions = c(17, 18), findPairedgRNAOnly = TRUE,
  min.gap = 0, max.gap = 20, gRNA.name.prefix = "gRNA", PAM.size = 3,
  gRNA.size = 20, PAM = "NGG", BSgenomeName, chromToSearch = "all",
  max.mismatch = 4, PAM.pattern = "N[A|G]G$", gRNA.pattern = "",
  min.score = 0.5, topN = 100,
  topN.OfftargetTotalScore = 10, annotateExon = TRUE,
  txdb, outputDir, fetchSequence = TRUE, upstream = 200, downstream = 200,
  weights = c(0, 0, 0.014, 0, 0, 0.395, 0.317, 0, 0.389, 0.079, 0.445, 0.508,
  0.613, 0.851, 0.732, 0.828, 0.615, 0.804, 0.685, 0.583),
  overwrite = FALSE)

```

Arguments

| | |
|------------------------|---|
| inputFilePath | Sequence input file path or a DNASTringSet object that contains sequences to be searched for potential gRNAs |
| format | Format of the input file, fasta and fastq are supported, default fasta |
| findgRNAs | Indicate whether to find gRNAs from the sequences in the input file or skip the step of finding gRNAs, default TRUE. Set it to FALSE if the input file contains user selected gRNAs plus PAM already. |
| exportAllgRNAs | Indicate whether to output all potential gRNAs to a file in fasta format, genbank format or both. Default to both. |
| findgRNAsWithREcutOnly | Indicate whether to find gRNAs overlap with restriction enzyme recognition pattern |

| | |
|--------------------------|--|
| REpatternFile | File path containing restriction enzyme cut patterns |
| minREpatternSize | Minimum restriction enzyme recognition pattern length required for the enzyme pattern to be searched for, default 6 |
| overlap.gRNA.positions | The required overlap positions of gRNA and restriction enzyme cut site, default 17 and 18 |
| findPairedgRNAOnly | Choose whether to only search for paired gRNAs in such an orientation that the first one is on minus strand called reverse gRNA and the second one is on plus strand called forward gRNA. TRUE or FALSE, default FALSE |
| min.gap | Minimum distance between two oppositely oriented gRNAs to be valid paired gRNAs. Default 0 |
| max.gap | Maximum distance between two oppositely oriented gRNAs to be valid paired gRNAs. Default 20 |
| gRNA.name.prefix | The prefix used when assign name to found gRNAs, default gRNA, short for guided RNA. |
| PAM.size | PAM length, default 3 |
| gRNA.size | The size of the gRNA, default 20 |
| PAM | PAM sequence after the gRNA, default NGG |
| BSgenomeName | BSgenome object. Please refer to available.genomes in BSgenome package. For example, BSgenome.Hsapiens.UCSC.hg19 for hg19, BSgenome.Mmusculus.UCSC.mm10 for mm10, BSgenome.Celegans.UCSC.ce6 for ce6, BSgenome.Rnorvegicus.UCSC.rn5 for rn5, BSgenome.Drerio.UCSC.danRer7 for Zv9, and BSgenome.Dmelanogaster.UCSC.dm3 for dm3 |
| chromToSearch | Specify the chromosome to search, default to all, meaning search all chromosomes. For example, chrX indicates searching for matching in chromosome X only |
| max.mismatch | Maximum mismatch allowed in off target search, default 4. Warning: will be considerably slower if set >4 |
| PAM.pattern | Regular expression of protospacer-adjacent motif (PAM), default N[A G]G\$ |
| gRNA.pattern | Regular expression or IUPAC Extended Genetic Alphabet to represent gRNA pattern, default is no restriction. To specify that the gRNA must start with GG for example, then set it to ^GG. Please see help(translatePattern) for a list of IUPAC Extended Genetic Alphabet. |
| min.score | minimum score of an off target to included in the final output, default 0.5 |
| topN | top N off targets to be included in the final output, default 100 |
| topN.OfftargetTotalScore | top N off target used to calculate the total off target score, default 10 |
| annotateExon | Choose whether or not to indicate whether the off target is inside an exon or not, default TRUE |

| | |
|----------------------------|--|
| <code>txdb</code> | TranscriptDb object, for creating and using TranscriptDb object, please refer to GenomicFeatures package. For a list of existing TranscriptDb object, please search for annotation package starting with Txdb at http://www.bioconductor.org/packages/release/BiocV such as TxDb.Rnorvegicus.UCSC.rn5.refGene for rat, TxDb.Mmusculus.UCSC.mm10.knownGene for mouse, TxDb.Hsapiens.UCSC.hg19.knownGene for human, TxDb.Dmelanogaster.UCSC.dm3.ensGene for Drosophila and TxDb.Celegans.UCSC.ce6.ensGene for C.elegans |
| <code>outputDir</code> | the directory where the off target analysis and reports will be written to |
| <code>fetchSequence</code> | Fetch flank sequence of off target or not, default TRUE |
| <code>upstream</code> | upstream offset from the off target start, default 200 |
| <code>downstream</code> | downstream offset from the off target end, default 200 |
| <code>weights</code> | a numeric vector size of gRNA length, default c(0, 0, 0.014, 0, 0, 0.395, 0.317, 0, 0.389, 0.079, 0.445, 0.508, 0.613, 0.851, 0.732, 0.828, 0.615, 0.804, 0.685, 0.583) which is used in Hsu et al., 2013 cited in the reference section |
| <code>overwrite</code> | overwrite the existing files in the output directory or not, default FALSE |

Value

Four tab delimited files are generated in the output directory: OfftargetAnalysis.xls (detailed information of off targets), Summary.xls (summary of the gRNAs), REcutDetails.xls (restriction enzyme cut sites of each gRNA), and pairedgRNAs.xls (potential paired gRNAs)

CRISPRseek

Examples

```
library(CRISPRseek)
library("BSgenome.Hsapiens.UCSC.hg19")
library(TxDb.Hsapiens.UCSC.hg19.knownGene)
outputDir <- getwd()
inputFilePath <- system.file("extdata", "inputseq.fa",
                             package = "CRISPRseek")
REpatternFile <- system.file("extdata", "NEBenzymes.fa",
                             package = "CRISPRseek")
offTargetAnalysis(inputFilePath, findgRNAsWithREcutOnly = TRUE,
                  REpatternFile = REpatternFile, findPairedgRNAOnly = FALSE,
                  BSgenomeName = Hsapiens, chromToSearch = "chrX",
```

```
txdb = TxDb.Hsapiens.UCSC.hg19.knownGene, max.mismatch = 1,
outputDir = outputDir, overwrite = TRUE)
```

searchHits *Search for off targets*

Description

Search for off targets for given gRNAs, BSgenome and maximum mismatches

Usage

```
searchHits(gRNAs, BSgenomeName, chromToSearch = "all", max.mismatch = 4,
PAM.size = 3, gRNA.size = 20, PAM = "N[A|G]G$")
```

Arguments

| | |
|---------------|--|
| gRNAs | DNAStrngSet object containing a set of gRNAs. Please note the sequences must contain PAM appended after gRNAs, e.g., ATCGAAATTCGAGCCAATC-CCGG where ATCGAAATTCGAGCCAATCC is the gRNA and CGG is the PAM |
| BSgenomeName | BSgenome object. Please refer to available.genomes in BSgenome package. For example, BSgenome.Hsapiens.UCSC.hg19 for hg19, BSgenome.Mmusculus.UCSC.mm10 for mm10, BSgenome.Celegans.UCSC.ce6 for ce6, BSgenome.Rnorvegicus.UCSC.rn5 for rn5, and BSgenome.Dmelanogaster.UCSC.dm3 for dm3 |
| chromToSearch | Specify the chromosome to search, default to all, meaning search all chromosomes. For example, chrX indicates searching for matching in chromosome X only |
| max.mismatch | Maximum mismatch allowed in off target search, default 4. Warning: will be considerably slower if it is set to greater than 4 |
| PAM.size | Size of PAM, default 3 |
| gRNA.size | Size of gRNA, default 20 |
| PAM | Regular expression of PAM, default N[A G]G\$ |

Value

a data frame contains IsMismatch.posX (indicator variable indicating whether this position X is mismatch or not, 1 means yes and 0 means not, X = 1 to gRNA.size) representing all positions in the gRNA), strand (strand of the match, + for plus and - for minus strand), chrom (chromosome of the off target), chromStart (start position of the off target), chromEnd (end position of the off target), name (gRNA name), gRNAPlusPAM (gRNA sequence with PAM sequence concatenated), OffTargetSequence (the genomic sequence of the off target), n.mismatch (number of mismatches between the off target and the gRNA), forViewInUCSC (string for viewing in UCSC genome browser, e.g., chr14:31665685-31665707), score (set to 100, and will be updated in getOfftargetScore)

offTargetAnalysis

Examples

```

all.gRNAs <- findgRNAs(inputFilePath =
  system.file("extdata", "inputseq.fa", package = "CRISPRseek"),
  pairOutputFile = "pairedgRNAs.xls",
  findPairedgRNAOnly = TRUE)

library("BSgenome.Hsapiens.UCSC.hg19")
### for speed reason, use max.mismatch = 0 for finding all targets with
### all variants of PAM
hits <- searchHits(all.gRNAs[1], BSgenomeName = Hsapiens,
  max.mismatch = 0, chromToSearch = "chrX")
colnames(hits)

```

| | |
|------------------|---|
| translatePattern | <i>translate pattern from IUPAC Extended Genetic Alphabet to regular expression</i> |
|------------------|---|

Description

translate pattern containing the IUPAC nucleotide ambiguity codes to regular expression. For example, Y->[C|T], R-> [A|G], S-> [G|C], W-> [A|T], K-> [T|U|G], M-> [A|C], B-> [C|G|T], D-> [A|G|T], H-> [A|C|T], V-> [A|C|G] and N-> [A|C|T|G].

Usage

```
translatePattern(pattern)
```

Arguments

pattern a character vector with the IUPAC nucleotide ambiguity codes

Value

a character vector with the pattern represented as regular expression

Author(s)

Lihua Julie Zhu

Examples

```
pattern1 <- "AACCNWMK"
translatePattern(pattern1)
```

| | |
|-----------|--|
| writeHits | <i>Write the hits of sequence search to a file</i> |
|-----------|--|

Description

write the hits of sequence search to a file, internal function used by searchHits

Usage

```
writeHits(gRNA, seqname, matches, strand, file, gRNA.size = 20,
          PAM = "N[A|G]G$", max.mismatch = 4, chrom.len, append = FALSE)
```

Arguments

| | |
|--------------|--|
| gRNA | DNAString object with gRNA sequence with PAM appended immediately after, e.g., ACGTACGTACGTACTGACGTCGG with 20bp gRNA sequence plus 3bp PAM sequence CGG |
| seqname | chromosome name as character, e.g., chr1 |
| matches | XStringViews object storing matched chromosome locations |
| strand | strand of the match, + for plus strand and - for minus strand |
| file | file path where the hits is written to |
| gRNA.size | gRNA size, default 20 |
| PAM | PAM as regular expression for filtering the hits, default N[A G]G\$ |
| max.mismatch | maximum mismatch allowed within the gRNA (excluding PAM portion) for filtering the hits, default 4 |
| chrom.len | length of the matched chromosome |
| append | TRUE if append to existing file, false if start a new file |

Value

results are saved in the file specified by file
