

# BSgenome.Ggallus.UCSC.galGal3

October 16, 2009

---

Ggallus

*Gallus gallus (Chicken) full genome (UCSC version galGal3)*

---

## Description

*Gallus gallus* (Chicken) full genome as provided by UCSC (galGal3, May 2006) and stored in Biostrings objects.

## Note

This BSgenome data package was made from the following source data files:

```
sequences: chromFa.tar.gz, upstream1000.fa.gz, upstream2000.fa.gz, upstream5000.
from http://hgdownload.cse.ucsc.edu/goldenPath/galGal3/bigZips/
AGAPS masks: all the chr*_gap.txt.gz files from ftp://hgdownload.cse.ucsc.edu/go
RM masks: http://hgdownload.cse.ucsc.edu/goldenPath/galGal3/bigZips/chromOut.tar
TRF masks: http://hgdownload.cse.ucsc.edu/goldenPath/galGal3/bigZips/chromTrf.ta
```

See [?BSgenomeForge](#) and the BSgenomeForge vignette (`vignette("BSgenomeForge")`) in the BSgenome software package for how to make a BSgenome data package.

## Examples

```
Ggallus
seqlengths(Ggallus)
Ggallus$chr1 # same as Ggallus[["chr1"]]

if ("AGAPS" %in% masknames(Ggallus)) {

  ## Check that the assembly gaps contain only Ns:
  checkOnlyNsInGaps <- function(seq)
  {
```

```
## Replace all masks by the inverted AGAPS mask
masks(seq) <- gaps(masks(seq) ["AGAPS"])
unique_letters <- uniqueLetters(seq)
if (any(unique_letters != "N"))
  stop("assembly gaps contain more than just Ns")
}

## A message will be printed each time a sequence is removed
## from the cache:
options(verbose=TRUE)

for (seqname in seqnames(Ggallus)) {
  cat("Checking sequence", seqname, "... ")
  seq <- Ggallus[[seqname]]
  checkOnlyNsInGaps(seq)
  cat("OK\n")
}

## See the GenomeSearching vignette in the BSgenome software
## package for some examples of genome-wide motif searching using
## Biostrings and the BSgenome data packages:
if (interactive())
  vignette("GenomeSearching", package="BSgenome")
```
