

Package ‘ELMER.data’

April 12, 2018

Title Data for the ELMER package

Version 2.2.2

Author Lijing Yao
Tiago Chedraoui Silva,
Simon Coetzee,
Ben Berman

Maintainer Tiago Chedraoui Silva <tiagochst@usp.br>

Description Supporting data for the ELMER package.

It includes:

- elmer.data.example.promoter: mae.promoter
- elmer.data.example: data
- EPIC.manifest.hg38
- EPIC.manifest
- hm450.manifest.hg38
- hm450.manifest
- hocomoco.table
- LUSC_meth_refined: Meth
- LUSC_RNA_refined: GeneExp
- Probes.motif.hg19.450K
- Probes.motif.hg19.EPIC
- Probes.motif.hg38.450K
- Probes.motif.hg38.EPIC
- TF.family
- TF.subfamily

License GPL-3

LazyData false

Depends R (>= 3.2.0)

Imports GenomicRanges

ELMER.data

*Data for ELMER package***Description**

ELMER is package using DNA methylation to identify enhancers, and correlates enhancer state with expression of nearby genes to identify one or more transcriptional targets. Transcription factor (TF) binding site analysis of enhancers is coupled with expression analysis of all TFs to infer upstream regulators. ELMER.data provide the necessary data for ELMER analysis:

- Probes.motif: motif occurrences within $-/+250$ bp of probe sites on HM450K/EPIC array aligned against hg19/hg38.
- DNA methylation platform manifest: from <http://zwdzwd.github.io/InfiniumAnnotation>
- TF.family TFs family from TFClass
- TF.subfamily TFs subfamily from TFClass

For more information how to create these objects please read the vignette of this package with the following command: `browseVignettes("ELMER.data")`
